

한 번에 끝내는 블록체인 개발 A to Z

Chapter 4

Javascript

Chapter 4

Javascript

async - await

Promise & async-await

```
async function test() {  
  let promise = new Promise((resolve, reject) => {  
    setTimeout(() => resolve("done"), 1000)  
  });  
  const result = await promise;  
  console.log(result); // done  
}
```

```
test();
```

Network request

```
function logFetch(url) {  
  return fetch(url)  
    .then(response => response.text())  
    .then(text => {  
      console.log(text);  
    }).catch(err => {  
      console.error('fetch failed', err);  
    });  
}
```

```
async function logFetch(url) {  
  try {  
    const response = await fetch(url);  
    console.log(await response.text());  
  }  
  catch (err) {  
    console.log('fetch failed', err);  
  }  
}
```
