Instructions

NameRecordHeader

```rust
pub struct NameRecordHeader {
    /// Names are hierarchical.  `parent_name` contains the account address of the parent
    /// name, or `Pubkey::default()` if no parent exists.
    pub parent_name: Pubkey,

    /// The owner of this name
    pub owner: Pubkey,

    /// The class of data this account represents (DNS record, twitter handle, SPL Token name/symbol, etc)
    ///
    /// If `Pubkey::default()` the data is unspecified.
    pub class: Pubkey,
}
```
