React

Error 다루기

Error Catching

```jsx
import { useState } from "react";
const MyButton = () => {
    const [error, setError] = useState(null);
    const handleClick = () => {
        try {
            throw Error("Unexpected Error");
} catch (error) {
            setError(error);
}
    };
    if (error) {
        return <span>Caught an error.</span>;
    }
    return <button onClick={handleClick}>Click Me To Throw Error</button>;
};
export default MyButton;
```
